FAQs

Why wedding content creation?

Wedding content creation provides fast-turnaround, professionally curated photos, videos, and social-ready reels delivered within days of your wedding. In addition to capturing your day, significant time is spent organizing, editing, and creating shareable content so you can relive your celebration while the memories are still fresh.

What equipment do you use?

Content is captured using a combination of smartphone technology and professional camera equipment. While much of the footage is filmed vertically for social media and quick sharing, our team also uses professional cameras and stabilization gear throughout the day to create a more polished, cinematic final product. This hybrid approach allows us to deliver both the authentic, in-the-moment feel couples love from content creation and the elevated quality that comes from professional equipment.

Do you record the entire ceremony?

Content creation focuses on capturing highlights and moments rather than providing full-length professional video coverage. For complete ceremony and reception coverage, I recommend hiring a videographer.

Will you work alongside my photographer and videographer?

Absolutely! We collaborate with your vendor team and work carefully to stay out of their shots while capturing additional angles and moments throughout the day.

Will our photos and videos be edited?

Yes! All delivered photos and videos receive light editing for color, exposure, and consistency. You'll also receive professionally crafted highlight reels designed for Instagram Reels, TikTok, and easy sharing with family and friends. Our goal is to provide content that feels polished and ready to post while still preserving the authentic moments of your wedding day.

How will our content be delivered?

Your content will be delivered through an online gallery or shared folder where you can easily view, download, and share your photos and videos.
